SUMMARY

I'm a final year Information Systems undergraduate at President University specializing in Data Science. Hands-on experience building data analytics dashboards, machine learning models, optimization systems, data pipelines, and database-backed applications. Skilled in Excel, Python, SQL, PostgreSQL, MySQL, scikit-learn, Pandas, Plotly, FastAPI, Django, Dagster, and Docker. Seeking internship opportunities in Data Analytics, Data Science, ML Engineering.

EDUCATION

President University | B.S. Information Systems, Data Science

Expected Aug 2027 | GPA: 3.64/4.00

Relevant coursework: Data Structures, Algorithms, Object-Oriented Programming, Databases, Web Development, Data Analytics, Machine Learning.

TECHNICAL SKILLS

Programming: Python, SQL

Data and ML: Pandas, NumPy, scikit-learn, Plotly

Frameworks: FastAPI, Django, Streamlit

Databases: PostgreSQL, MySQL

Tools: Dagster, Docker, Git, VS Code, Google Colab, pgAdmin.

PROJECTS

DVD Rental Analytics Dashboard with AI Forecasting and Chat | [GitHub](#)

Feb - May 2026

Python, FastAPI, PostgreSQL, scikit-learn, Plotly

- Built a full-stack analytics dashboard for rental and revenue data with Linear Regression forecasting, seasonal detection, and R2 scoring.
- Integrated DeepSeek for natural-language data Q&A and dashboard actions, plus a local Transformer for zero-shot business insight classification.

DVD Staff Performance and Bonus Analytics | [GitHub](#)

March 2026

Python, Django, PostgreSQL, Pandas, scikit-learn

- Designed analytical fact and dimension structures and aggregated staff revenue and customer activity by month.
- Trained a Gradient Boosting regression model to predict staff performance and support bonus allocation in a Django application.

CargoOptima - Fleet Space Optimization | [GitHub](#)

Jun - Aug 2026

JavaScript, Three.js, Node.js/Express, PostgreSQL

- Built a 3D bin-packing engine with six item orientations, support and adjacency constraints, and multi-fleet cost optimization; reduced computation to under 3 seconds on 250 item datasets.
- Developed an interactive Three.js simulator with rotation, hover details, loading sequence animation, and REST API support.

Weather Prediction Data Pipeline | [GitHub](#)

Aug 2026

Python, Dagster, Pandas, Docker, scikit-learn

- Built an orchestrated machine learning workflow that ingests weather data, transforms and validates it, then trains a Random Forest prediction model.
- Structured the workflow as Dagster assets for repeatable data processing and monitoring.

ADDITIONAL UNIVERSITY PROJECTS

FindMyClass | Flutter, Python, PHP, MySQL | Designed the MySQL database for classrooms, buildings, users, schedules, and AI-assisted planning. [GitHub](#)

PreuTix | PHP, MySQL, XAMPP | Built campus event listing, authentication, image upload validation, ticket workflow, and invoice generation. [GitHub](#)

CERTIFICATION

- [Excel & Copilot Fundamental by Microsoft](#)

Score: 98/100

LEADERSHIP

- **Chairperson, KMB Ashokavardhana**, President University | *Dec 2025 - Present* | Lead organization-wide strategy, event planning, and committee coordination.
- **Head of Division, PUMA Information Systems** | Sep 2025 - Aug 2026 | Led Creative and Student Activity Affairs and coordinated major student events.

LANGUAGE PROFICIENCIES

- Indonesian (Native)
- English (Intermediate)
